

## Progression Routes for Apprentices 2023

### Heating & Ventilation

If you are currently studying at Level 3, you could then progress on to a Degree at university or begin a Higher/Degree apprenticeship.

Career progression routes include: moving into a managerial role, supervise a team of engineers, or work in technical sales. With further training, you could become a building services engineer or facilities manager.

If you do not have the entry requirements to go to university, you could study a Bridging course with LCB to increase your UCAS points and/or enhance your CV.

**Remember, you do not have to go on to study higher education straight away, you can go into employment and consider HE at a later point in your life, if and when you want to open up your career options.**
